#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mineo, in view of Ito.

Mineo describes a watercraft [11] having an exhaust system, comprising an exhaust passage extending between an exhaust manifold of the engine and an exhaust discharge port on a first side of the hull tunnel. The exhaust passage has an intermediate portion extending above the top of the hull tunnel, and includes a watertrap device positioned on a second side of the hull tunnel.

Mineo is silent on the provision of a first chamber.

Ito describes the provision of a first chamber [101] branching upwardly from and communicating with an intermediate portion of an exhaust passage, and positioned above the hull tunnel. The first chamber branches out at a position that is downstream from an apex (figure 6) of the intermediate portion (line 20, column 7).

Application/Control Number: 09/844507

Art Unit:

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the first chamber in the intermediate portion of the exhaust passage of Mineo, as taught by Ito. Such a modification would have been desirable at the time the invention was made to provide a noise attenuation device for the exhaust passage that does not cause undesirable back pressure, and also traps water when the watercraft overturns.

# **Double Patenting**

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ormum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit:

4. Claims 22-47 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-26 of U.S. Patent No. 6,261,140 B1.

All limitations set forth in (a) claims 22-26, (b) claims 27-32, (c) claims 33 and 34, (d) claims 35-38, (e) claims 39 and 40, (f) claims 41-44, and (g) claims 45-47 of the application are fully encompassed in claims (a) claims 1-5, (b) claims 6-11, (c) claims 12 and 13, (d) claims 14-17, (e) claims 18 and 19, (f) claims 20-23, and (g) claims 24-26, respectively, of the U.S. Patent No. 6,261,140 B1.

Claims 1-26 of U.S. Patent No. 6,261,140 set forth an exhaust passage extending between an exhaust manifold and a discharge port, and disclose all limitations being claimed in the claims 22-47, except the exhaust passage extending between the exhaust port and a discharge port.

It is noted that an engine manifold is used to combine several engine ports into a single passage. However, if the engine has only one exhaust port, an engine manifold would not be necessary. Therefore, it would have been obvious for one skilled in the art to remove the exhaust manifold from the at least one exhaust port of the engine of U.S. Patent No. 6,261,140, and attach the exhaust passage directly to the exhaust port. Having such an arrangement would enable one to minimize components used in the exhaust discharge system, and would make its attachment to the engine economical and easier to install.

Application/Control Number: 09/844507

Art Unit:

### Allowable Subject Matter

- Claims 22-47 would be allowed if the applicant overcomes the double-patenting rejection 5. by filing a terminal disclaimer in compliance with 37 CFR 1.321(c) and by showing the conflicting patent as being commonly owned with this application.
- Any inquiry concerning this communication or earlier communications from the examiner 6. should be directed to Ajay Vasudeva whose telephone number is (703) 306-5992.
